DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Examiner's Amendment

1. An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicants, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the Issue Fee.

Please change the following:

In the claim:

In claim 11, line 6, after "therethrough" *add* **"and said cutout having a width adapted to allow said terminal block to circumferentially shift rotationally about a center of an axial direction of said coil bobbin"**

The above Examiner's amendment was approved by the attorney of record during a phone conversation on 2/2/05.

Allowable Subject Matter

Claims 1-11 are allowed.

Reason for Allowability

The following is an examiner's statement of reasons for allowance: the primary reason for the allowance is the including, *in combination with other limitations recited in the claims*, the following particular inventive features:

Coupled stator yokes housing the bobbin therein and having a cutout for allowing the terminal block to protrude therethrough, and **said cutout having a width adapted to allow said terminal block to circumferentially shift rotationally about a center of an axial direction of said coil bobbin.**

Comparing to the prior-art of the record, the most relevant ref is Kato (UPS 4,924,124) disclosing a stator assembly having coupled stator yokes housing the bobbin therein and having a cutout for allowing the terminal block to protrude therethrough. Kato particularly discloses the wire leads (25-29) extending from the opening (21) to the outside of the motor cover are inserted from the insertion port (22b) into the outlet (22a) and slightly slackened. In other words, Kato discloses the wire leads themselves being routed out the cutout and inserted into the wire outlet, wherein the wire leads are being slightly slackened, not the connector terminal being smaller than the opening so that the terminal would be slightly slackened in order to circumferentially shift rotationally about a center. Thus, none of the prior art references of the record, either stand alone or in combination, has taught or suggest the above-mentioned features in combination with other limitations recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
